

SCREEN SHARING

Abstract

A screen sharing system includes receiving an
5 indication of a screen sharing condition from a remote
device, receiving data from a viewing device, and hosting a
screen sharing session between the remote device and the
viewing device. Hosting may include making a session key
available to the remote device and to the viewing device,
10 the session key providing access to the screen sharing
session, receiving session keys from both the remote device
and the viewing device, and establishing the screen sharing
session in response to receiving the session keys..
